

BE ACTIVE

during your studies

Take your studies seriously and challenge yourself. Get the most out of them!
You are here to develop your professional skills.

The studies are connected to working life, which makes it easier to get familiar with the Finnish culture and traditions together with the special aspects of Finnish working life.

Your study counsellor helps you with all issues concerning your studies. In the beginning of your studies, you will draft a personal study plan (PSP). The plan will guide you through your studies and help you make the right choices for your future.

Practical training is an important part of a Bachelor's degree. It is especially important for your professional growth and expertise, and it might even lead to your first professional job.

Working life projects and company visits of the UAS courses give you an overview of local companies and a chance to show your ambitions and skills.

Take up the challenge! Study the Finnish language and explore the culture. You never know where it will lead you.

“ Career planning is a continuous process that helps you manage your learning and development „

This is a model for international students starting their studies and heading for employment in Finland.

This model helps you better understand the study path in the Finnish universities of applied sciences and guides you to working life in Finland.

We hope this model is a useful tool for you during your studies in Finland!
