

UI testing with Selenium Grid on Xamk Virtual Lab

Xamk QA Workshop
Sami Hämäläinen & Rion Nakayama

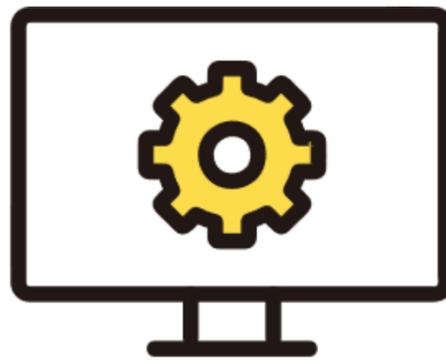

Vipuvoimaa
EU:lta
2014–2020

tämä esitys on tehty osana Ohjelmistojen laadunvarmistuspajan perustaminen -hanketta, joka on saanut Etelä-Savon maakuntaliiton myöntämänä rahoitusta Euroopan aluekehitysrahastosta

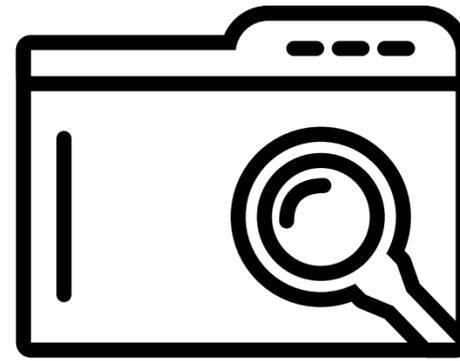

WHAT IS SELENIUM GRID?

Automation Testing

Automate web browser

replicate user interaction with web applications, such as visiting URL, clicking buttons, or text input

UI testing tool

Originally developed for automation testing purposes. Verify that the web application works as it's expected.

Selenium Project

One of the tools of Selenium framework, which is an open-source project.

WHY IS IT USEFUL?

Cross-Platform & Cross-Browser

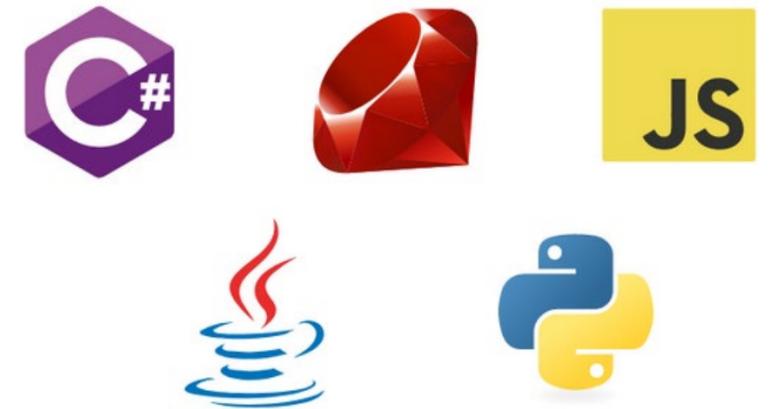

Support for various
browsers&OS

Parallel Testing

support for various
programming languages

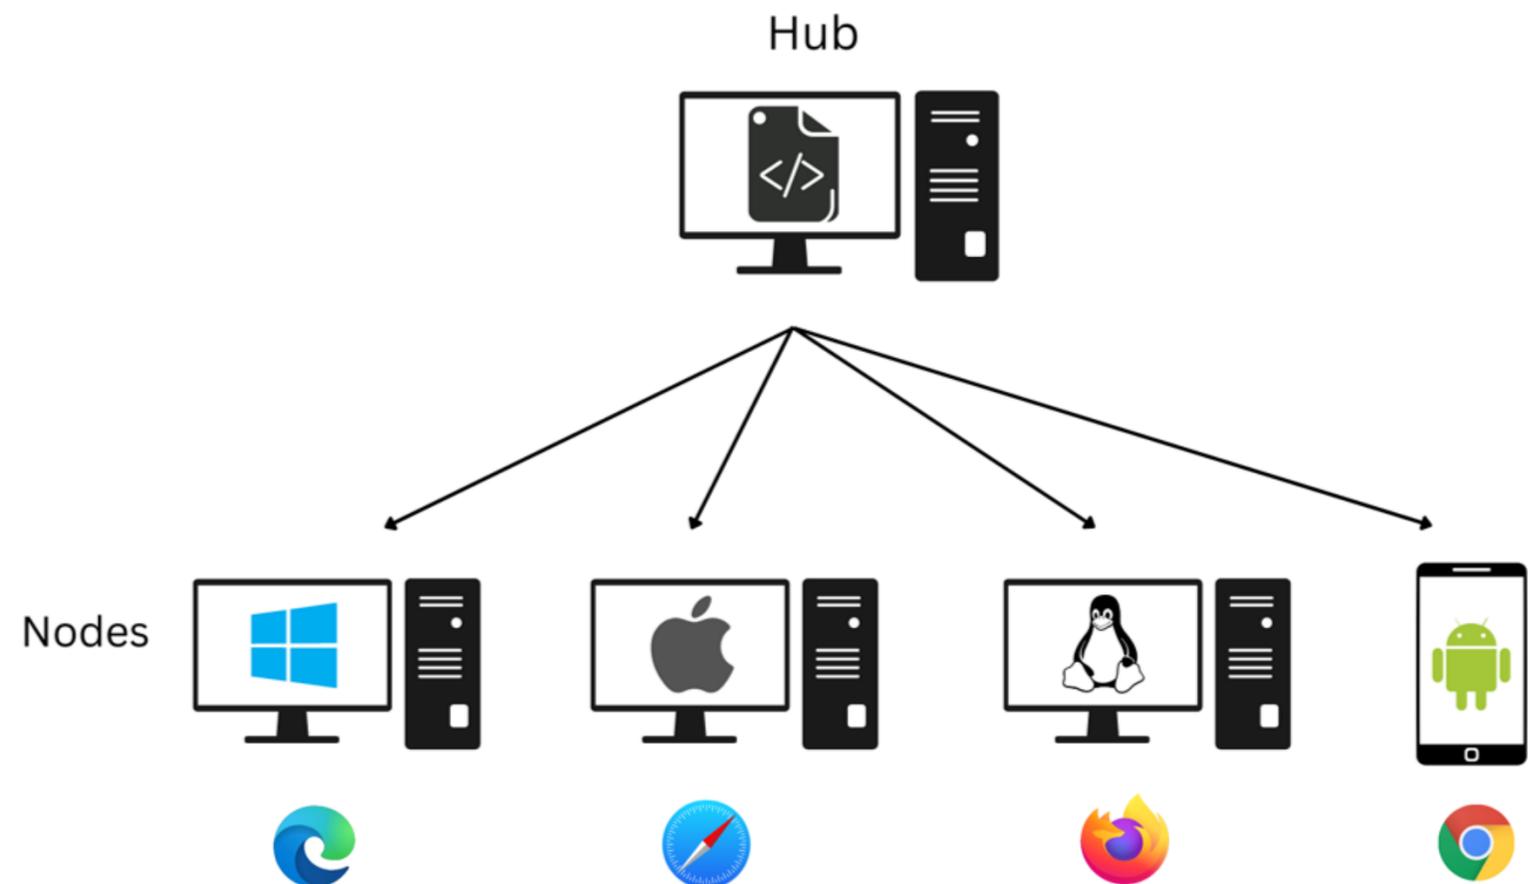

HOW SELENIUM GRID WORKS?

Hub

- central control point of Grid
- manages test execution

Node

- receive instructions from hub
- responsible for executing test scripts

SELENIUM GRID WITH XAMK VIRTUAL LAB

Require multiple devices or VMs

Costly to build Grid environment

Complex to maintain hub & nodes

Suitable for
handling multiple VMs

Open for Xamk students

Users can run multiple VMs online

Simple to network machines

Efficiently arrange a budget-friendly Selenium Grid setup

TESTCASE WITH MEDIAMAISTERI

MediaMaisteri

IT company providing online training environment, support for learning content creation, and consultation service.

Web Application

Learning Platform based on Moodle, which is open-source learning management system

Test Environment

- Selenium Grid set up in Xamk Virtual lab
- One hub machine and three node machines
→ Linux, Win10, Win11
- Chrome, Firefox, MS Edge

Test

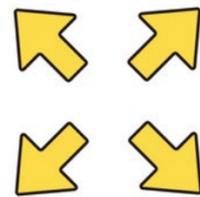

No specific test scope offered by company
→ Automate basic features of the application

CONCLUSION

Joint utilization was effective

Utilizing Virtual Lab made it smooth to create and network hub-nodes relation of Selenium Grid.

Easy to extend test scope

User can add other virtual machines to the scenario easily, making it simple to extend test scope.

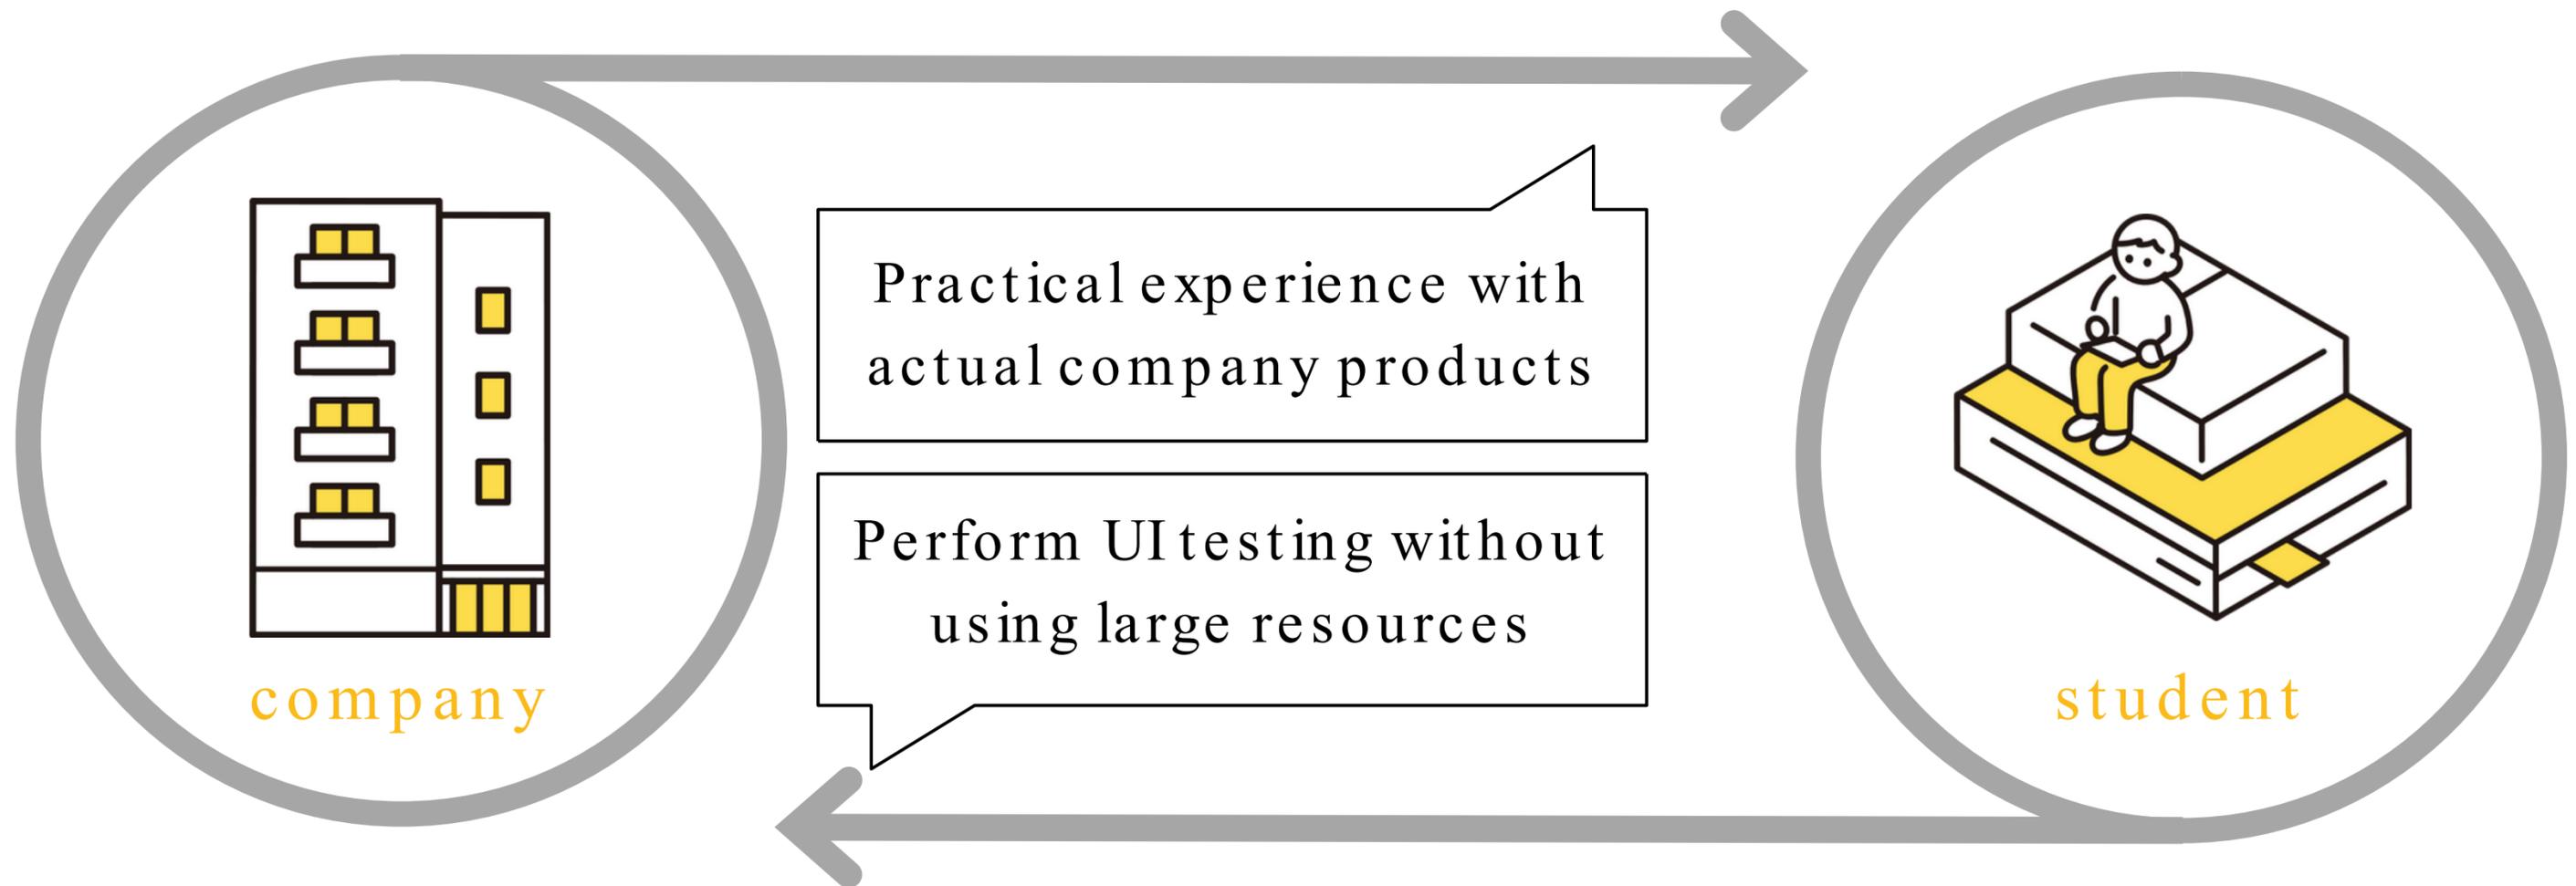

Optional internet connection

Possibility of creating the scenario isolated from internet connection, which reduces the risk of information leak.

FUTURE DEVELOPMENT

We hope for strong interest from companies in engaging in these collaborations, promoting an active environment of frequent interactions.

Tunne huomisen - All for the future.
